

...continued

- Golf courses provides 100's of acres **natural habitats** for a variety of animals and insects.
  - Golf courses are more supportive of **pollinators, nesting and foraging habitat** than **residential and industrial areas**.
- Golf courses do **use water, fuel, fertilizers, and chemical, but** utilize them in a **safe and regulated manner**.
  - Golf is **more regulated** than **farming** and even what you can use on your **home lawn and landscaping**.
  - **Technology** in this regard has helped significantly.
