**Re: Cove Road – Tuttle**

Dear Mr. Tuttle:

O'Rourke Engineering & Planning has completed the analysis of the proposed 97.06 acres of development to be located on Cove Road just east of Trover Lane in Martin County, Florida. The steps in the analysis and the ensuing results are presented herein.

It has been a pleasure working with you. If you have any questions or comments, please give me a call.

Respectfully submitted,  
**O'Rourke Engineering & Planning**

  
Susan E. O'Rourke, P.E.

## INTRODUCTION

O'Rourke Engineering & Planning., Inc. was retained to prepare a traffic analysis for the proposed 97.06 acres of Residential development to be located on Cove Road just east of Trover Lane in Martin County, Florida. The project will have its access a single driveway on Cove Road. **Appendix A** includes the site plan for the project. The purpose of this report is to determine the project's impact on the surrounding roadway system. The buildout is analyzed to demonstrate the ability to receive concurrency.

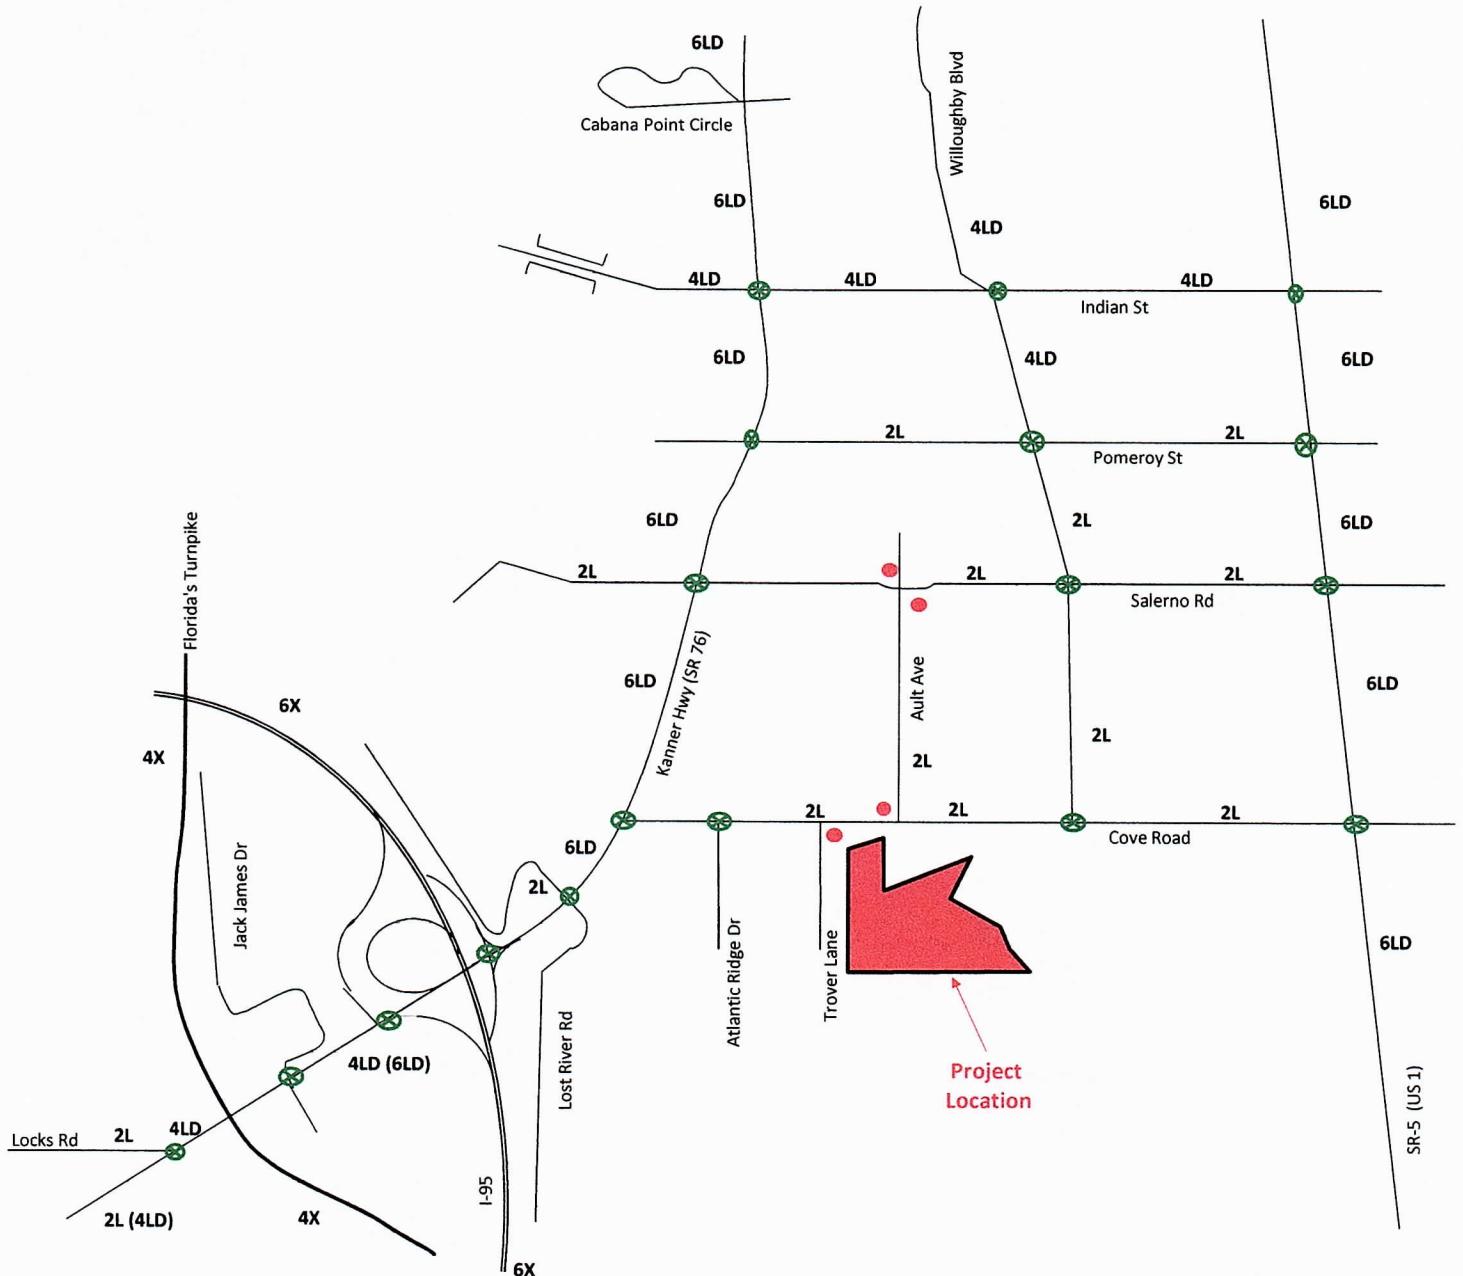

In order to make the determination that the project complies with County Concurrency Guidelines, the following analytical steps were taken:

- ♦ summary of the project,
- ♦ summary of existing lane geometrics,
- ♦ summary of maximum allowable service volumes,
- ♦ assessment of project traffic,
- ♦ determination of study area,
- ♦ summary of cumulative traffic volumes,
- ♦ comparison of volumes to allowable levels of service

Each of these steps is outlined herein.

## PROJECT DESCRIPTION

The proposed 97.06 acres will be a Residential development consisting of 118 Single Family Residential dwelling units. It will be constructed in two phases. Phase 1 will consist of 81 units with a buildout of 2022. The buildout year of all 118 units is 2027. The project location as well as the surrounding roadway signs and features are shown in **Figure 1. Appendix A** also includes the local transit, bicycle, and pedestrian features for the surrounding area.

Project Location  
Cove Road-Tuttle

## **ROADWAY CONDITIONS**

The study area is defined as the roadways upon which the project has an impact of 2% of the level of service capacity of the roadway or any impact to the adjacent street. Once the project traffic was assigned, the study area was refined based on the impact percentages.

The study area roadways were defined in terms of existing lane geometrics and existing traffic volumes.

### **Existing Lane Geometrics**

The study area was reviewed to determine the existing number and type of lanes and the traffic control along the roadway. Each roadway is described below.

- SE Cove Road is a two-lane arterial roadway with east/west alignment. The road is included in the five-year plan for PDE to go to four-lane and the number 1 MPO priority construction remains unfunded
- SE Salerno Road is a two-lane collector roadway with east/west alignment.
- SE Willoughby Boulevard is a two-lane arterial with a north/south alignment.
- SR76 (Kanner Highway) is a six-lane divided arterial with a generally north/south alignment.

## **PROJECT TRAFFIC**

To estimate traffic generated by the Cove Road project, the ITE Trip Generation, 10<sup>th</sup> Edition Single Family Residential (ITE Code 210) trip rates were applied. In Phase 1 the project will Generate 52 PM inbound trips. At buildout, the project will generate 75 PM peak hour inbound trips. The trip generation for the proposed project is shown in **Table 1a and 1b**.

Table 1a: Trip Generation - Phase I - 81 Units

**Daily**

Description	Land Use Code	Intensity	Units	Daily Trip Generation	Directional Split		Gross Trips		
					In	Out	In	Out	Total
Single Family Residential	210	81	DU	$\ln(T) = 0.92 * \ln(X) + 2.71$	50%	50%	429	429	857

**AM Peak Hour**

Description	Land Use Code	Intensity	Units	Equation	Directional Split		Gross Trips		
					In	Out	In	Out	Total
Single Family Residential	210	81	DU	$T = 0.71(X) + 4.80$	25%	75%	16	46	62

**PM Peak Hour**

Description	Land Use Code	Intensity	Units	Equation	Directional Split		Gross Trips		
					In	Out	In	Out	Total
Single Family Residential	210	81	DU	$\ln(T) = 0.96 * \ln(X) + 0.20$	63%	37%	52	31	83

Source: ITE 10th Edition Trip Generation Rates

## **PROJECT DISTRIBUTION / ASSIGNMENT/ IMPACT**

The project traffic was distributed by general geographic direction and then assigned to the roadway network.

**Assignment --** This general distribution led to an assignment of trips based on the anticipated ultimate destinations and the roadway paths used to reach those destinations. The project assignment is shown in **Figure 2**.

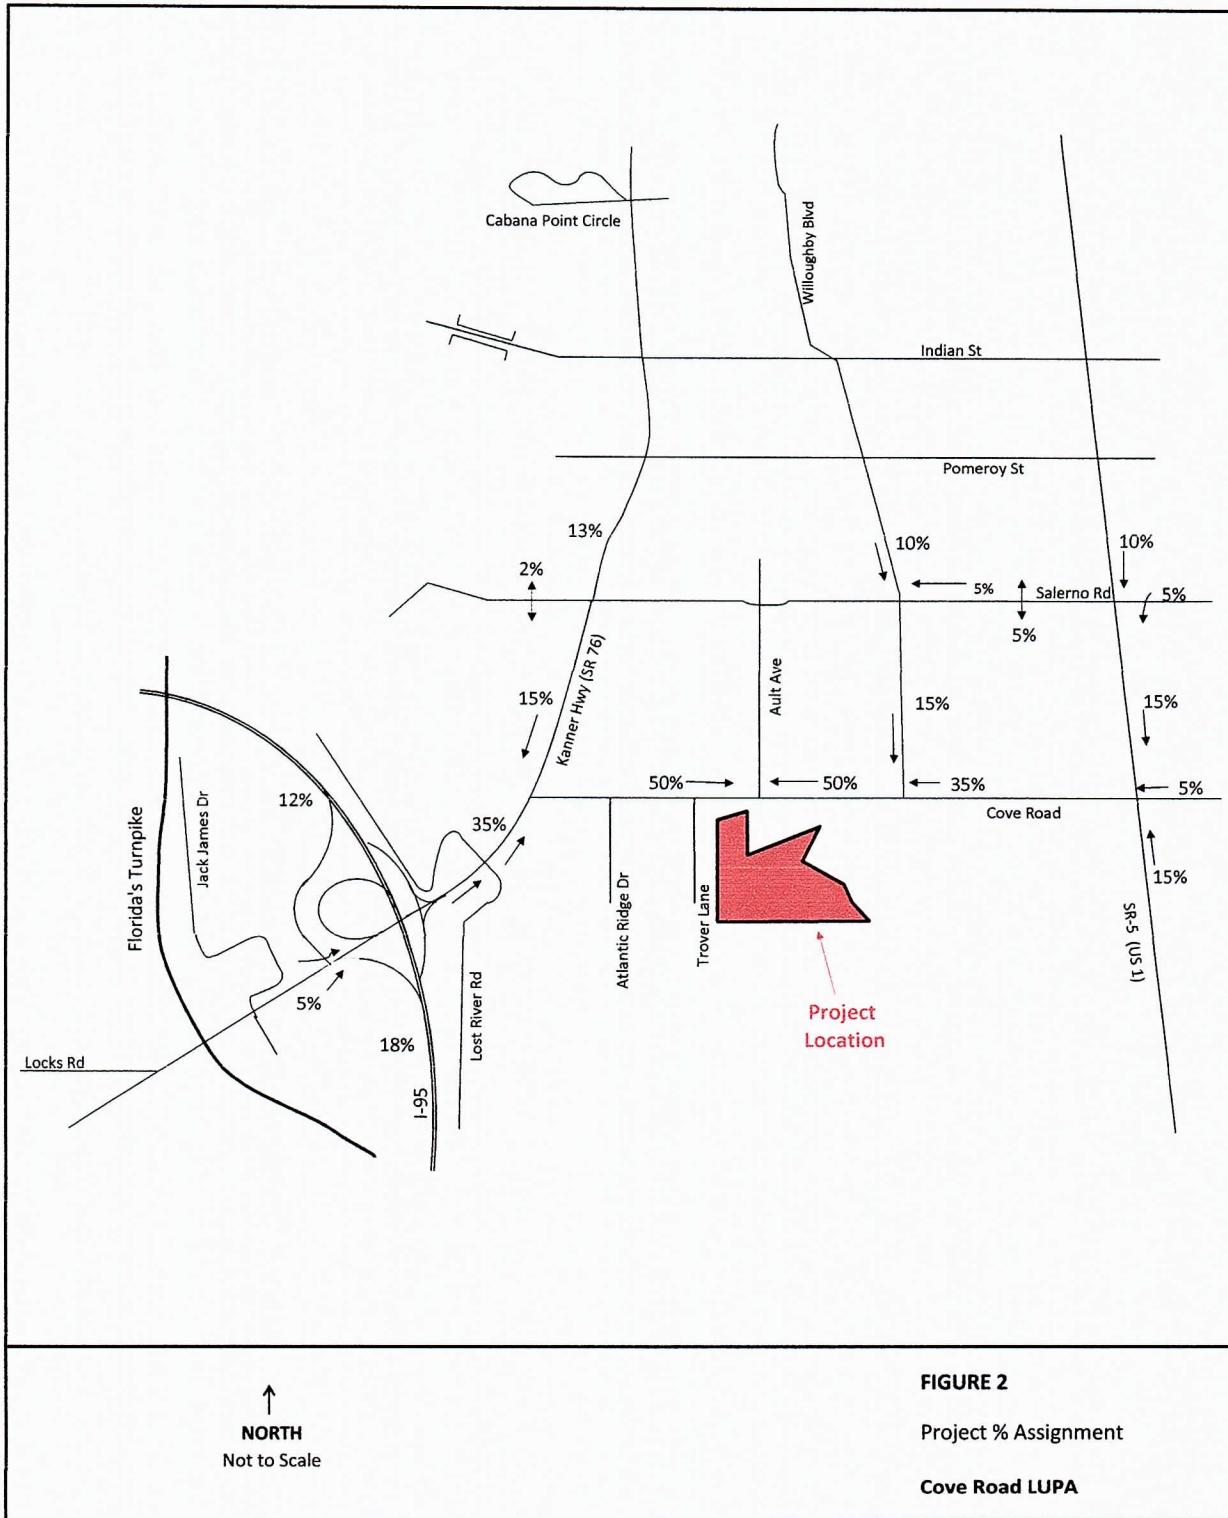

**Project Impact --** **Table 2a and 2b** summarize the project impact as it relates to the percent of the service volume capacity or maximum allowable service volume for the project at Phase 1 and Project Buildout, respectively. As shown, the project has its greatest impact at 4.32% of capacity on Cove Road.

## **FUTURE TRAFFIC**

Martin County maintains traffic spreadsheets that summarize the existing traffic volumes on the major roadway network. The volumes in the spreadsheet are for 2018. The 2018 volumes were taken from the County spreadsheet and increased by the growth rate provided in the spreadsheets. The project traffic was then added to estimate the 2022 future Total Traffic Volumes for Phase 1 and 2027 for buildout. The total traffic volumes are within an acceptable level of service as shown in **Tables 3a and 3b** for Phase 1 and buildout, respectively. Both directions were provided in order to support the detailed analysis. **Appendix B** includes the Martin County 2018 Roadway LOS Inventory Report. An arterial analysis was prepared for Cove Road to demonstrate acceptable level of service. **Appendix C** includes the detailed Art Plan analysis.

## **CONCLUSION**

The Cove Road development will have a traffic impact of 1,220 net daily trips, 89 net AM peak hour trips, and 120 PM peak hour trips. Based on the data and calculations presented herein, the project does not require additional analysis and is deemed to be consistent with transportation concurrency requirements.

\*STL-TCC = St. Lucie County Transit

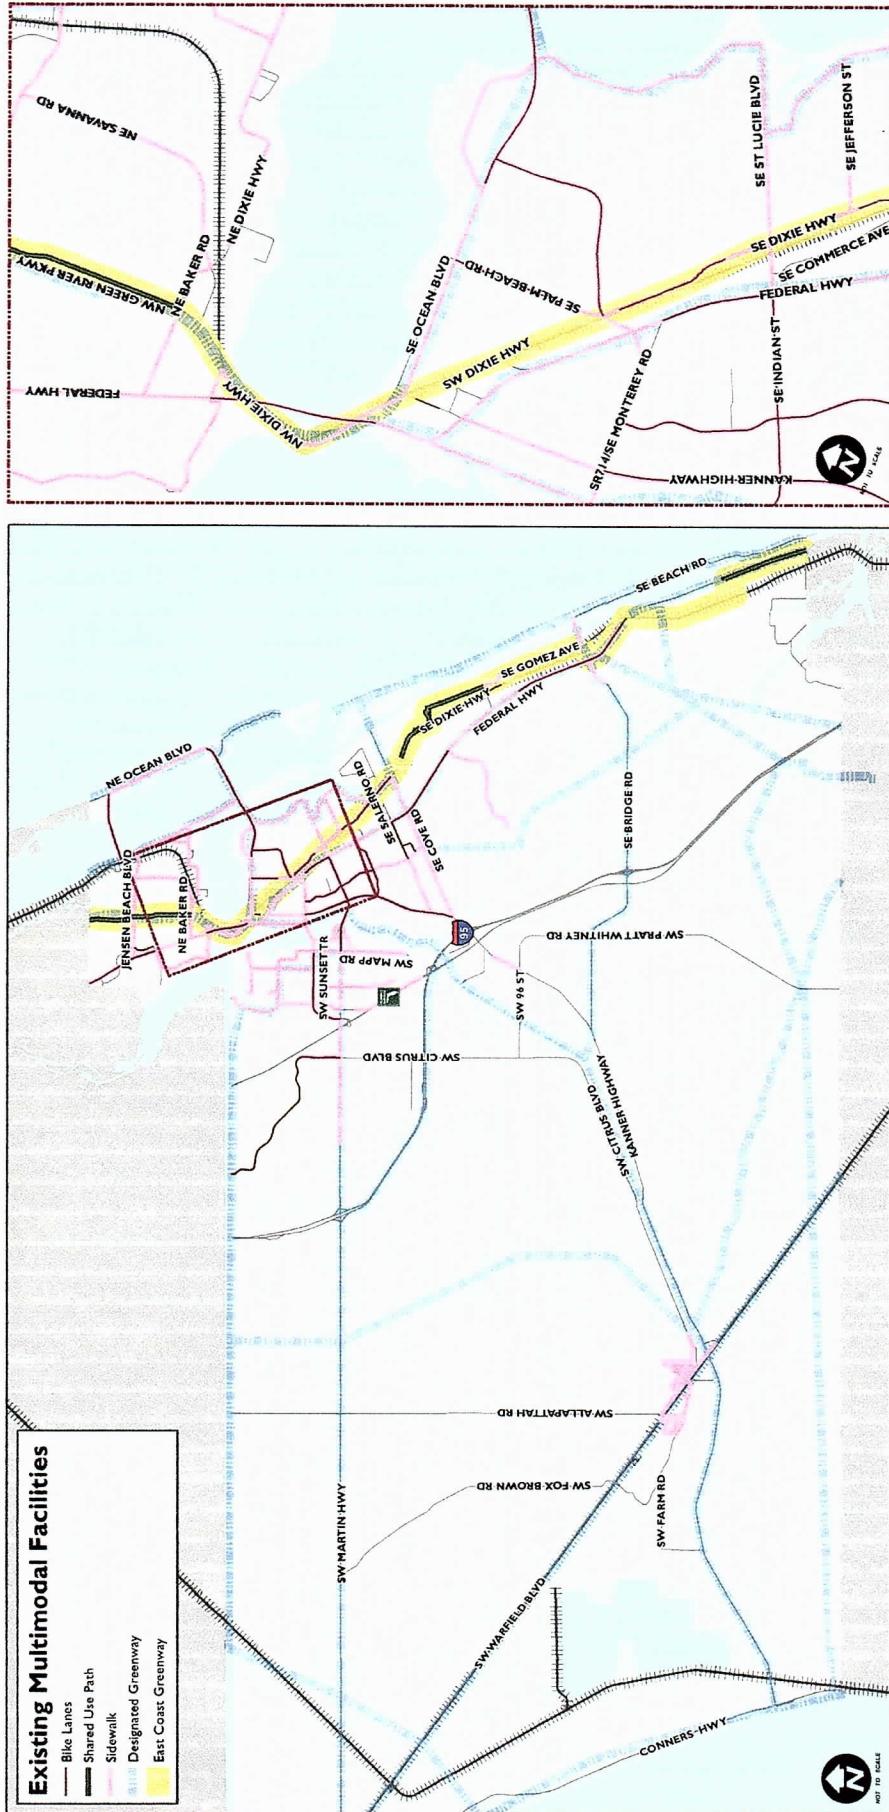

Figure 2-2: Existing Multimodal Facilities

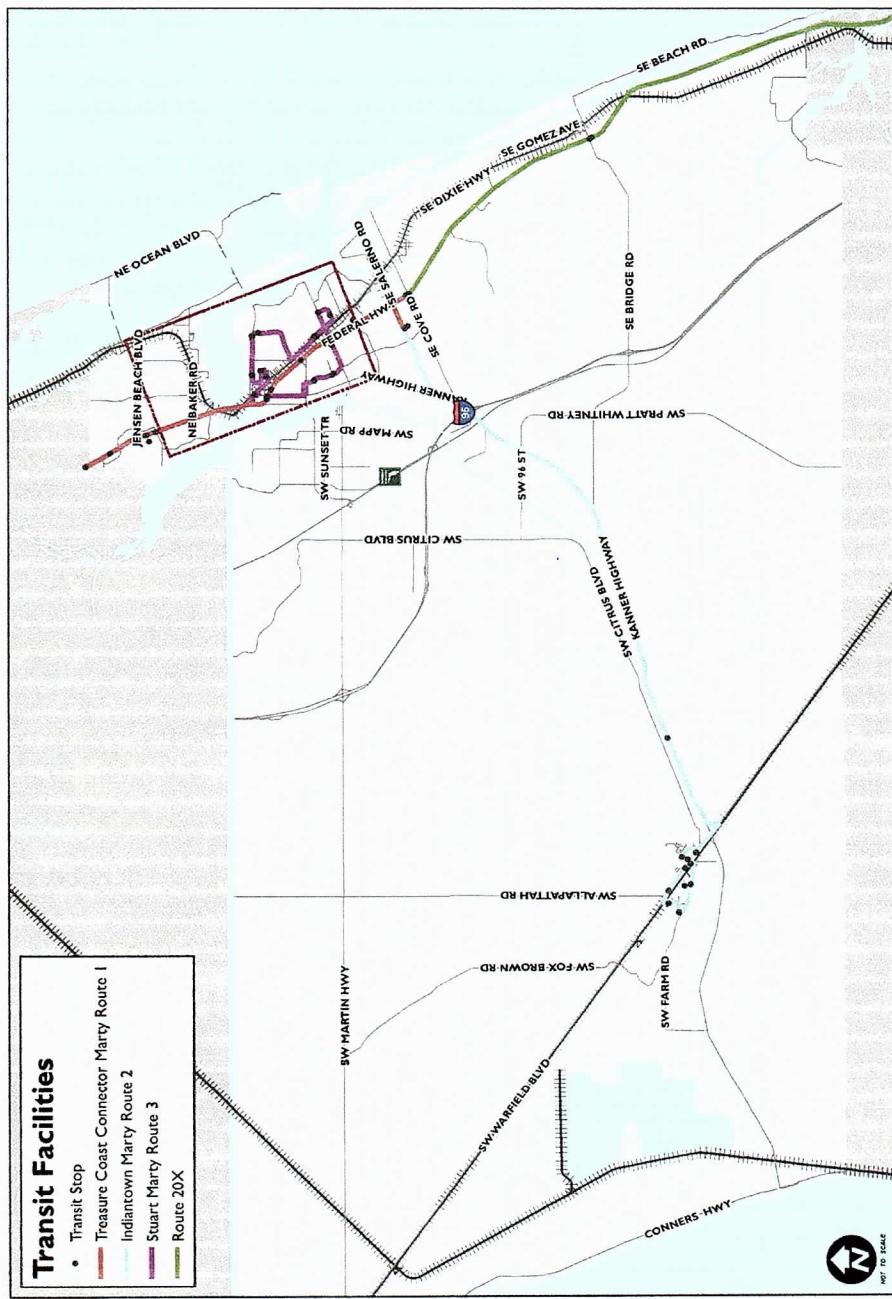

Figure 2-2 provides an overview of existing and designated bicycle and pedestrian facilities. This includes roadways with existing bike lanes, shared use paths, and sidewalks along major roadways. As illustrated, nearly all the existing bike lanes and shared use paths are located within the eastern portion of the County and serve to connect the urbanized areas. Included in Figure 2-2 is the proposed East Coast Greenways (ECG), which are trails of regional and statewide significance and connect to Palm Beach and St. Lucie Counties. The light-green network represents the Designated Greenways – these greenways do not necessarily represent existing bike facilities, rather they identify corridors along which to provide a facility.

# MARTIN MPO BICYCLE, PEDESTRIAN & TRAILS MASTER PLAN

## Transit Facilities

- Transit Stop
- Treasure Coast Connector Marti Route 1
- Indiantown Marti Route 2
- Stuart Marti Route 3
- Route 20X

A-5

Figure 2-3. Transit Facilities

Figure 2-3 illustrates the locations of the transit routes and stops in Martin County. Four bus routes serve Martin County. Route 1/US 1 Corridor provides service from Port Salerno north to St. Lucie County while Route 20X provides commuter service south to Palm Beach County. Route 2/Indiantown serves as a connector between Indiantown and the urbanized east coast of Martin County while Route 3/Stuart provides a circulator service within the Stuart urbanized area.
