

mitigate the erosion impacts caused by the St. Lucie Inlet. As the responsible entity for the St. Lucie Inlet, the COUNTY has complied by periodically placing sand in a volume and frequency that maintains a minimum average of 161,000 cubic yards per year as a long-term solution to inlet impacts.

The County worked with the Town during their regularly scheduled beach restoration project. By partnering with the Town on the beach restoration project, the County would fulfill its sand bypassing requirement. In 2018 the County entered into an agreement with the Town to construct this project. This option also offered the advantage of reducing the overall unit price for the sand. The County agreed to provide \$6,275,000 to the Town to fund the placement of 500,000 cubic yards of sand that were credited as "bypass".

With the completion of the 2018 project, the Town approached County staff to amend the original agreement to include details clarifying the disposition of any remaining funds. This amendment resolves any questions regarding fair apportionment.
